

We claim:

1. A combination of a two-mirror assembly mounted internally near the rear window in a vehicle to reflect the field below the rear window to the driver's regular main rear view mirror.
2. A combination of internal mirror assembly according to claim 1, wherein said the first mirror is mounted near the top of the rear window, facing the field below the rear window, and the second mirror is mounted near the bottom of the rear window to reflect the image from the first mirror to the driver's regular main rear view mirror.
3. A combination of internal mirror assembly according to claim 1, wherein said the first mirror is a convex mirror mounted near the top of the rear window and the second mirror is a flat mirror mounted near the bottom of the rear window to reflect the image from the convex mirror to the driver's regular main rear view mirror.
